

KUSH

TWEAKER

Sidechain Shaping Compressor

OPERATIONAL OVERVIEW

Tweaker is an old soul with a post-modern brain. Its vintage, discrete-VCA and bespoke detector are married to envelope-pushing controls that allow this box to be whatever you want it to be: smooth & polished or dark & filthy, subtle & delicate or fierce & explosive.

To achieve such extremes, Tweaker stretches and expands the range and function of its traditional compressor controls, then breaks new ground with a radical and innovative 'Sidechain Shaper' section. This expansion of the classic, coupled with the introduction of the cutting edge, enable this box to create a wider array of effects than any other compressor ever made; if you can envision it, Tweaker can deliver it.

Tweaker sports 8 hi-torque 21-step pots for precision matching & recall; UBK leveraged this design to give you his 'analog presets' which precisely emulate his favorite tricks from compressors as varied as the LA-2a, Distressor, API 2500, even the absurdly eccentric Valley People Dynamite.

With simultaneous Tri-Metering of Input/Output/Gain Reduction levels, Single or Dual-stage Release, Wet/Dry Mix, and a unique 'Curve' control that sharpens the knee as the ratio is increased, Tweaker is the new king of swiss army compressors and embodies another modern classic from Kush.
